WHAT IS CELLULITE?

Cellulite is the common term we use for what looks like the dimpling of the skin, found mostly on the thighs and buttocks and more often seen on women than on men. Scientifically speaking, cellulite is simply the outward result of a disturbance of the skin's underlying connective tissue. Wherever your body has localized, excess fatty deposits, dimpling can appear on the surface of the skin and is called cellulite.

INDEPENDENT ANALYSIS*

Analysis of self-assessment questionnaires showed that the use of Figure 8 Vanish Contouring Cellulite Cream and Pre-Shower Cellulite Scrub over a 12-week period on cellulite-prone areas resulted in significant improvements in cellulite appearance, tactile roughness and skin dryness for a vast majority of the 28 participants.

PATENT-PENDING SYSTEM The Figure 8 Vanish 2-step Cellulite System has patents pending in the United States and Switzerland.

WHAT IS WATER RETENTION?

Water retention is a common condition that contributes to a puffy appearance to the skin and sometimes feelings of discomfort. As the body matures, water retention becomes a more pressing challenge. Puffiness often makes marks on the skin's surface, like cellulite, more obvious due to contrast. Overcoming water retention requires an elegant solution that balances moisture levels in the body.
